SmartWaste AI

Prototype for Samathuvapuram

SmartWaste AI

AI-powered waste monitoring for cleaner and healthier communities.

Residents report waste with a photo, the AI engine grades severity, and sanitation workers receive timely collection alerts before the waste becomes excessive.

How SmartWaste AI helps

Repeated waste accumulation near homes causes bad smell and unhygienic conditions. SmartWaste AI closes the loop between reporting, detection and collection.

AI Waste Detection

Upload a photo and the analysis engine estimates waste volume, overflow and unhygienic conditions in seconds.

🚨 Smart Collection Alerts

High and critical reports instantly raise an alert for the sanitation team with location, severity and time.

📍 Recurring Hotspot Detection

Locations reported repeatedly are flagged as hotspots so collection routes can be scheduled preventively.

Complete workflow

Step 1

Resident reports waste with a photo

Step 2

AI analyses image and grades severity

Step 3

Admin receives alert and assigns collection

Step 4

Status updated & recurring hotspots flagged
